

Assignment 3: "An Inconvenient Truth"

Geo 09

Name: \_\_\_\_\_

DUE: Nov 3<sup>rd</sup> in class

This movie is available via streaming, using the campus' video furnace. The streamed version of the movie is only accessible using Amherst College-registered computers that are ON CAMPUS. You can get to the movie using the "E-reserves" link at the upper left of the course web page.

The central theme of this movie is global warming. As you watch, list eight climate-related events/changes that are occurring and the cause of each event. After you finish the movie, research three of your "events" and try to identify causes other than global warming that might cause such phenomena to occur. Think carefully about the rate and scale of these processes. Web-based research is OK for this exercise, but be sure to cite your sources in the text with footnotes/endnotes, and list your references/urls at the end of your writeup.

EVENT

CAUSE?
